Art Unit: 3724

DETAILED ACTION

Specification

1. The specification is objected to under 37 CFR 1.71, as being confusing and difficult to comprehend the invention and compare with prior art. For example, the following items are not understood: It is unclear how the speed reduction part reduces the amount of a drive force applied to the cutting blade after it transits the center of the optical fiber. See the rejections under 35 USC § 112, first paragraph for more details

Applicant is required to submit an amendment which clarifies the disclosure so that the examiner may make a proper comparison of the invention with the prior art.

Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter which is not supported by the disclosure as originally filed).

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 17 and 21-25 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.
- 4. In the "In the Specification" portion of the amendment filed on 22 September 2004, the phrase reducing an amount of a drive force applied to the cutting blade by the speed reduction part" is unclear. The speed reduction part is considered to be, using

Art Unit: 3724

Figure 2, items 6 and 7 only. That being said, items 6 and 7 only control the speed at which the blade can move across the insertion hole and not the amount of force the is applied to the cutting blade. The only thing that could control reducing an amount of a drive force applied to the cutting blade is the interactions between the cam 10 and the cam follower 11. The shape of the cam allows the cam to push the cam follower towards the insertion hole and allows the cam follower to retract away from the insertion hole thereby reducing the amount of force. It is uncertain if the shape of the cam coincides with the reducing the force when the cutting blade transits the center of the optical fiber.

- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 6. Claims 17 and 21-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 7. In regards to claim 17, the phrase "reducing an amount of the drive force applied to said cutting blade after said cutting blade transits the center of said optical fiber by a drive speed reduction device" is unclear. It is clear that the drive speed reduction device control the speed of the blade but it is unclear what structure allows the drive speed reduction device to reduce the amount of force applied to the blade.
- 8. In regards to claim 25, the phrase "the moving step further comprises transmitting said drive force between said drive force transmission part and said motor by forcibly rotating one of said plurality of speed reducing gears" is unclear. It is

Art Unit: 3724

uncertain how rotating one of the plurality of speed reducing gears transmits the drive force between the drive force transmission part and the motor. In the specification, it clearly states that "after the reduction gears 6 and 7 have meshed, when the switch of the motor 5 is turned on, the drive force of the motor which starts rotating is transmitted", therefore a switch transmits the drive force not the manual rotation of the plurality of speed reducing gears

9. It is to be noted that claim 17 and 21-25 has not been rejected over prior art. It may or may not be readable over the prior art but cannot be determined at this time in view of the issues under 35 USC § 112.

Response to Arguments

10. Applicant's arguments with respect to claims 17 and 21-25 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

- 11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Phillips and Pfeiffer.
- 12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Prone whose telephone number is 703-605-4287. The examiner can normally be reached on 7:30-5:00, Mon (every other) Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Allan N. Shoap can be reached on 703-308-1082. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
